

App. No. 10/782,133
Amendment Dated: July 2, 2007
Reply to Office Action of March 2, 2007

Amendments to the Specification:

Please replace the paragraph beginning on line 4 of page 1 with the following:

Some personal computers allow a user to "write" on their computer display much as they would write on their notepad. One such computer is a tablet Personal Computer (PC) which typically includes the functionality of a laptop computer but including more input features. For example, a tablet PC allows multi-modal input in which a user can input information into the tablet by writing on the touchscreen with a pen, using a keyboard, or even using their voice. A user can take notes just as they would using traditional pen and paper. Handwriting recognition allows the user's handwriting to be converted into digital text. The form factor of a many touchscreen PCs, however, requires a user to move their entire arm and hand to access the menus and toolbars when they want to perform some sort of command. This is much more difficult and tiring than just moving your hand and wrist a little bit with a mouse on a traditional PC.

Please replace the paragraph beginning on line 20 of page 2 with the following:

With reference to FIGURE 1, one exemplary system for implementing the invention includes a computing device, such as computing device 100. In a very basic configuration, computing device 100 typically includes at least one processing unit 102 and system memory 104. Depending on the exact configuration and type of computing device, system memory 104 may be volatile (such as Random Access Memory (RAM)), non-volatile (such as Read Only Memory (ROM), flash memory, etc.) or some combination of the two. System memory 104 typically includes an operating system 105, one or more applications 106, and may include program data 107. A pen and ink interface allows a user to enter writing directly on the touchscreen. In one embodiment, application 106 may include a glom widget application 120. This basic configuration is illustrated in FIGURE 1 by those components within dashed line 108.

Please replace the paragraph beginning on line 3 of page 3 with the following:

Computing device 100 may have additional features or functionality. For example, computing device 100 may also include additional data storage devices (removable and/or non-removable) such as, for example, magnetic disks, optical disks, or tape. Such additional storage is illustrated in FIGURE 1 by removable storage 109 and non-removable storage 110. Computer storage media may include volatile and nonvolatile, removable and non-removable media implemented in any method or technology for storage of information, such as computer readable instructions, data structures, program modules, or other data. System memory 104, removable storage 109 and non-removable storage 110 are all examples of computer storage media. Computer storage media includes, but is not limited to, RAM, ROM, Electronically Erasable Programmable Read Only Memory (EEPROM), flash memory or other memory technology, Compact Disc Read Only Memory (CD-ROM), digital versatile disks (DVD) or other optical storage, magnetic cassettes, magnetic tape, magnetic disk storage or other magnetic storage devices, or any other medium which can be used to store the desired information and which can

be accessed by computing device 100. Any such computer storage media may be part of device 100.
